## Shades and Globes

HERE are a great many different kinds of glass used in illumination, and we make every kind. The purpose of this book is to show you the principal kinds of globes and shades for use with gas and electricity.

Most of the shades illustrated in this book are intended for residence lighting, but many of them—especially Alba—are also appropriate for offices, stores, hotels, restaurants, public buildings—all places where efficient, agreeable and beautiful light is desired.

To get the utmost illumination-value—the desired quantity of light where you want it, in the color and softness you want, and with the least waste—you must bear in mind what can be accomplished by the proper shade or globe:

- 1st Diffusing or softening of light
- 2nd Directing light—sending it where you want it
- 3rd Coloring light (if desired)

It is generally understood that the function of a shade or globe is to soften light, and that a bare source of light is a danger to the eye and health. It is not, however, generally understood that in removing glare one shade absorbs or wastes

much more light than another; neither is understood the extent to which light is distributed differently by shades of differing shapes.

### Illumination versus Decoration

Almost everybody chooses shades from the decorative point of view. People like their homes, offices and stores to "look well", and do not give full value to the original purpose of the shade. Therefore, most of the shades generally used, and most of the shades illustrated in this book, are primarily ornamental. But we are interested in illumination quite as much as we are in glass and therefore we have kept out of this book the most wasteful forms of glassware.

We make the right shades and globes for every kind and size of lamp, to distribute light in the best way, with the minimum of waste and with the softest, most usable resulting illumination.

The best glass for almost every illuminating use is Alba. It is highly efficient and economical, handsome and easy to keep clean. It does not change the color of light but softens over-brilliancy without smothering or wasting illumination. It has unusual reflective powers, and distributes light accurately. By daylight Alba is a beautiful white. When lighted up it has an exquisite alabaster-like glow.

Alba gives good results with almost any lamp of approximately correct size; but scientific illumination—that is, the best illumination—requires exactly the right lamp and shade or globe in combination. If you will use Alba shades with the correct lamp, you will have more economical and restful illumination than it is possible to get in any other way.

### Decorative Shades

The decorative shades you will choose yourself according to your taste. The illustrations speak for themselves. The usual decorative shade may be used with any lamp which seems to fit it and gives the correct amount of light. The lamp must not, of course, hang below the shade as that exposes the eye to the bare filament which is both harmful and irritating.

Of decorative glassware, the most remarkable is Iridile which, by daylight, has exquisite iridescent coloring. When it is lighted, a beautiful, soft, amber glow is produced. The color-effect produced by Iridile on the complexion and fine fabrics is distinctly favorable. This is an important consideration in rooms used for social purposes. In addition to its highly decorative character, Iridile has remarkable reflecting qualities; and while, of course, it is not so efficient as Alba or even as some other colorless glasses, it gives much more light than other colored glasses—and it is extremely beautiful.

### Assistance in Good Lighting

Our Illuminating Engineering Department is constantly making recommendations to householders, owners of stores, buildings, hotels, etc., as to the best methods of giving them the sort of light suited to their purposes. The services of this department are always at your disposal.

---

Most good dealers sell our globes and shades, and all dealers can get them.

Take this book to any dealer and he will have no trouble in securing for you the shades and globes you desire. They may also be seen at any of our branches mentioned on page 6.

The different kinds of glass illustrated in this book are:

Iridile: pages 11 to 16.

An iridescent glass with amber as the prevailing tone and the iridescence running into all colors of the rainbow. Either plain Iridile, verde, or verde crackled. (See also Portable Lamps.)

Lustro: page 16.

A delicate-tone iridescent glass with very light topaz prevailing.

Agalite: pages 17 and 18.

A dense vari-colored glass, very decorative. (See also Portable Lamps.)

Alba: pages 19 to 40.

For public buildings the best lighting glassware and in many respects the best for residences: economical, efficient, beautiful, and in some forms (notably Alba Bowls) exquisitely decorative.

Cut Glassware: pages 41 to 64.

Smooth, frosted glassware, with simple or elaborate cutting. Uncolored glass, but very decorative.

Leaded Glassware: pages 65 to 71.

Clear and frosted glass with painted decoration to represent leaded glass and lantern effects.

Cuirass: pages 72 to 74.

Crystal and colored glass frosted set in art brass.

Duplex Etched: pages 75 to 80.

A two-tone effect produced by etching.

"Positive" means: background satin finished, design frosted

"Negative" means: frosted background with satin finished design

Simplex Etched: page 81.

The background is frosted and the design clear glass.

Crystal Ribbed: pages 82 and 83.

Similar to the foregoing with only formal line patterns.

Frosted with Crystal Design: pages 84 and 85.

The design is clear and pressed into the glass and the background frosted.

Portable Lamps: pages 87 to 93.

Crystal Roughed Inside: pages 94 to 99.

Clear glass frosted on the inside.

Decorated Glassware: pages 100 to 102.

Designs of various sorts.

Triplex Etched: page 102.

A three-tone effect produced by etching.

808 W 804	1 1/2 inches	4 7/8 inches	8 3/4 inches

\*Furnished in White, Brown and Green design

### Decorative and Useful Illumination

This picture illustrates one of the most beautiful and otherwise satisfactory methods of lighting — semi-indirect illumination with Alba Bowls.

Part of the light is reflected to the ceiling and in turn reflected again to all other parts of the room. The rest of the light is diffused directly through the bowl to the lower part of the room.

The resulting illumination is soft, even and agreeable to the eyes with just enough shadow to aid in distinguishing objects readily.

Illumination of this sort shows the furniture and furnishings of the room to full advantage and is in itself extremely beautiful without being obtrusive. Handsome at all times — by day or night.

The Alba Bowl illustrated on this page is shown complete with fixture on page 30 and without fixture on page 31.

## RETURN TO DESIGN DIV.

### Alba Pendent Spheres for Store Illumination

Where the illumination is agreeable people feel much more at home. They stay longer; see better; do their work more thoroughly; buy more; and are better satisfied.

The best means that we know for general store illumination are Tungsten lamps enclosed in Alba Pendent Spheres, or Alba Ornamental Balls, illustrated on pages 28 and 29 of this book. See also Alba Ornamental Ball, pages 24 to 27.

These Alba units give an ample amount of soft, agreeable light, without the sharp shadows that result from the usual indoor arc light.

They are very easy to keep clean and take care of and there is no delay arising from the renewal of lamps.

On the whole by far the most satisfactory method of store lighting.

Shall we send you our special book on this subject?
